

COMPANY OVERVIEW

10+ years of SAP finance experience and SAP cloud architecture

Finance modules, S/4HANA transformation and SAP cloud architecture.

FINANCIAL OVERVIEW

INCOME STATEMENT (USD)

In millions	2023	2024	% Change
Revenue	\$8,426	\$9,731	+15.5%
Cost of Revenue	\$4,189	\$4,896	+16.9%
Gross Profit	\$4,237	\$4,835	+14.1%
Operating Expenses	\$2,213	\$2,456	+11.0%
Operating Income	\$2,024	\$2,379	+17.5%
Net Income	\$1,512	\$1,881	+24.4%
EPS (USD)	\$2.45	\$3.04	+24.1%

REVENUE (USD)

BALANCE SHEET (USD)

Operating Margin	24.0%	24.5%
Net Margin	17.9%	19.3%
ROE	16.8%	
ROA	10.5%	

SAP Finance Modules

End-to-end design and implementation across FI, CO, PA and PS.

HOW THE WORK RUNS

- 01 Diagnosis of the current setup
- 02 Chart of accounts and enterprise structure
- 03 Costing and profitability
- 04 Redesign of the financial close
- 05 Go-live and handover

WHO IT SUITS

- Groups consolidating several company codes into one reporting logic
- Finance teams whose close runs long without a measurable cause

DURATION

Diagnosis 3-4 weeks • Redesign 4-7 months

FROM FRAGMENTED FINANCE TO A UNIFIED ARCHITECTURE

Data, processes, controls,
and reporting come together
in one system.

S/4HANA Transformation

The route is chosen on evidence: a system scan turns the debate from opinion into fact.

HOW THE WORK RUNS

- 01 Readiness scan and route decision
- 02 Clearing customisation debt
- 03 Finance transformation
- 04 Data migration and testing
- 05 Cutover and hypercare

WHO IT SUITS

- ECC users needing a conversion plan before maintenance deadlines
- IT organisations carrying custom code of unknown value

DURATION

Assessment 4-6 weeks • Conversion 6-14 months

CONVERSION ROUTES, COMPARED

System conversion

Brownfield

The existing system is converted in place. History is preserved; processes stay largely as they are.

New implementation

Greenfield

The system is built from scratch. Processes are renewed; historical data moves in limited form.

Selective transition

Hybrid

Chosen data and processes are carried over. Often the shorter and cheaper total for multi-entity groups.

SAP Public Cloud

Cloud ERP Public Edition: standard scope, fast deployment, low operational load.

HOW THE WORK RUNS

- 01 Fit assessment
- 02 Fit-to-standard and finance setup
- 03 Extensibility strategy
- 04 Release-cycle readiness
- 05 Cutover and user training

WHO IT SUITS

- Mid-market companies willing to build on standard processes
- Organisations with a small internal IT function

DURATION

Assessment 2-3 weeks • Deployment 3-5 months

WHERE CHANGE IS ALLOWED

STANDARD CORE

Not modifiable. Quarterly releases apply automatically.

EXTENSION LAYER

Requirements met only through supported extension methods.

Which of your processes fall outside standard scope is measured before the contract, not after.

SAP Private Cloud

RISE with SAP and Cloud ERP Private Edition: cloud operations without giving up process flexibility.

HOW THE WORK RUNS

- 01 Defining responsibility boundaries
- 02 Target architecture and sizing
- 03 Finance transformation
- 04 Migration and cutover
- 05 Hypercare and handover

WHO IT SUITS

- Companies whose industry processes fall outside standard scope
- Regulated sectors needing control over data residency

DURATION

Preparation 5-8 weeks • Migration 7-14 months

WHERE RESPONSIBILITY SITS

SAP

Infrastructure, base operations, platform availability

CPEAK

Architecture, finance processes, migration management

YOUR TEAM

Process ownership, acceptance testing, daily operation

The boundary is written down before the project starts — that is where most RISE programmes lose time.

Public and Private Cloud compared

Cost model

PUBLIC Subscription by user and scope; upgrades included.

PRIVATE Varies with sizing; upgrade testing stays with you.

Extensibility

PUBLIC Core fixed; separate extension layer.

PRIVATE Core modification allowed; existing ABAP carried across.

Upgrade cadence

PUBLIC Regular, automatic, not deferrable.

PRIVATE You set the timing; each upgrade is its own project.

Implementation

PUBLIC 3–5 months, single-country finance scope.

PRIVATE Typically 7–14 months.

Typical fit

PUBLIC Mid-market, close to standard.

PRIVATE Heavy customisation and integration history.

We take no side. Processes are compared against standard scope and both models are put side by side. The decision stays yours.

AI in Finance

SAP's AI capabilities are embedded, not bought separately. We measure which ones fit, then phase them in.

IN YOUR PROCESSES

Delivered to your team

- Intelligent matching of bank and open items
- Anomaly detection before the close
- Predictive accounting within the period
- Joule for natural-language querying

IN OUR DELIVERY

Preparation work, compressed

- Custom code inventory and impact analysis
- First drafts of test scenarios
- Migration reconciliation checks
- Initial configuration documentation

Rule. No decision producing a financial posting is finalised without human review.

What is delivered

DELIVERABLES

- Diagnostic report with prioritised findings
- Target architecture and chart of accounts design
- Configuration documentation
- Data migration plan and reconciliation reports
- Test scenarios and recorded results
- Hour-by-hour cutover plan with rollback criteria
- Key user training and operating handbook

REPORTING, FIXED AT THE OUTSET

- Weekly status: done, in progress, risks, decisions pending
- Open decision list with owners and dates
- Risk register: owner, impact, mitigation
- Phase-end pack: documents, test records, acceptance
- Change log with time and cost impact

How we work

Each stage ends in a defined deliverable. No stage starts before the previous one closes.

DURATION

01	Assessment	2-6 weeks
02	Architecture and roadmap	3-6 weeks
03	Delivery	3-14 months
04	Hypercare	4-12 weeks

Organisations our consultants have worked with

Our approach

Measure first

No recommendation without system data.

Written reasoning

The decision is yours; the rationale stays on paper.

Early warning

A slipping estimate is reported that week.

Ownership transfer

Tests and the first close are run together.

Phases, not headcount

Growing scope is split, not staffed up.

AI in preparation

Volume work automated, judgement reviewed by seniors.

ENGAGEMENT MODELS

Assessment

2-6 weeks

A decision is needed and the evidence is missing.

Delivery

3-14 months

The decision is taken and needs building.

Expert support

Days to weeks

Depth needed in one area of a running programme.

What we work on

FOUNDED 2021 · ISTANBUL · TÜRKİYE, EMEA, UNITED STATES · SENIOR CONSULTANTS ONLY

01

Finance modules

SAP FI · CO · PA · PS

Enterprise structure, chart of accounts, controlling, profitability and the close.

02

Cloud architecture

PRIVATE · PUBLIC

Fit assessment, target architecture and migration management.

03

AI and RPA automation

EMBEDDED IN SAP

Matching, anomaly detection and predictive accounting.

WORK WE DECLINE

- Lead responsibility for modules outside our specialism
- Staff augmentation without delivery responsibility
- Fixed-price transformation before an assessment
- Software development or infrastructure operations

CONTACT

Tell us about your project

We respond within one business day. The first call runs 30–45 minutes at no cost.
